Checkboxy radioButton

Gabriela Gordillo Camacho María José Corredor Garzón

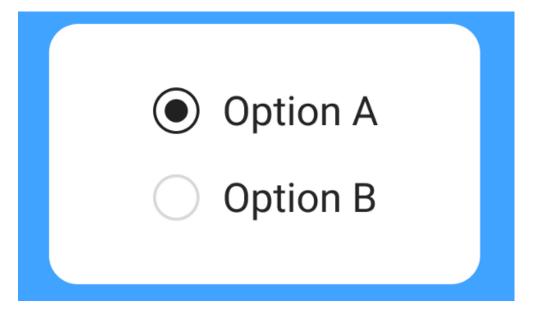

¿Qué son?

Son botones de dos estados. Permiten la selección múltiple

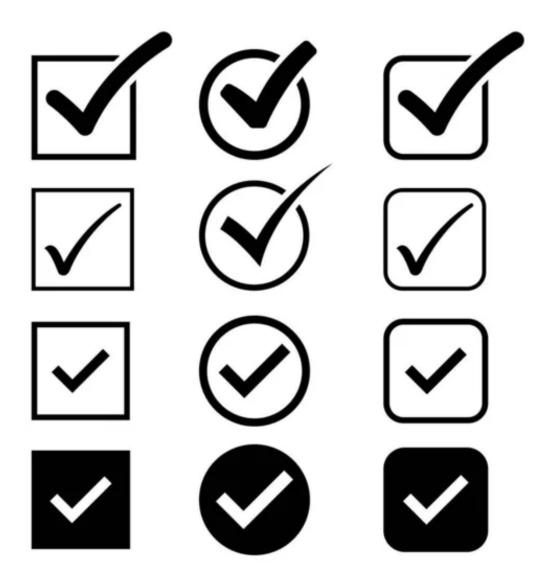

Selección de una opción dentro de un grupo de botones.

Características

- Controles de casilla en grupos
- True/false
- Mayor selección
- Marcado, desmarcado o indeterminado

Constructores

- JCheckbox()
- JCheckbox(Icon icono)
- Jcheckbox(String texto)
- Jcheckbox(String texto, boolean seleccionado)

Ejemplo de aplicación

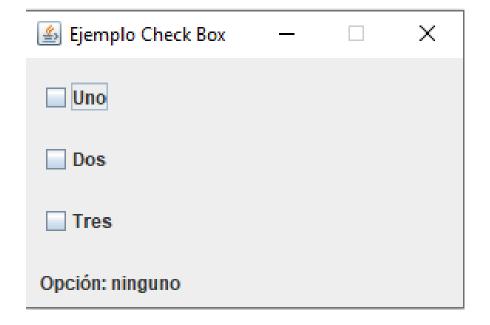

Programación orientada a objetos Facultad de Ingeniería Sede Bogotá 2023
